

# Client Meeting Notes #6 (May 23)

---

## Aims

- Show the new evaluation section
  - Last presentation for the prototype before the presentation
  - Get feedback from the clients
  - Need to have our questions answered
- 

## Chat Log

- Anna, Hiraani, Ashley and Victoria are in the meeting
  - Anna gives more information to the the clients about the upcoming presentation on June 5th
- Nat thanks the clients for their time since this is the final meeting and gives a quick layout of how we want this meeting to proceed
- Saacha walks through the training modules
  - Unveils the text-to-speech function to Hiraani and Ashley
  - Hiraani asks if the speech is recorded or generated
  - Mentions that nothing has changed over the training modules aside from this function
- Nat goes through the authentication side
  - Mentions that we've separated the log-in for admin and support
  - Shows that there are error messages when inputting incorrect credentials
  - Mentions that there is a forgot password functionality and how the process goes
  - Demonstrates how the forgot password function is done
- Zainab walks through the support side
  - Mentions the filter for the archived and working trainees and the design that differentiates them
  - Can search up trainees on the search bar
  - Unveils the new evaluation session for the trainees
  - Hiraani asks Victoria if this works
    - Victoria needs to understand how the session table is populated
    - Zainab demonstrates how to populate the table by evaluating a trainee
    - Needed some clarity about where the trainee's feedback
    - Apparently they do not store the ticks in the task list
    - They keep a record of the notes, particularly which section of the task they achieved/did not achieved

- They wanted a judgement call for each task (Future Enhancement)
  - Iste mentions that the judgement call is done by the trainees
  - They want to save the task chart (Future Enhancement)
  - We let them know that we will try to work on it given the time that we have
- Shows the drop-down filter to filter out the task notes and the search bar as well
- Mentions that we didn't change anything for the trainee note functionality
- Iste walks through the admin side
  - Demonstrates the archived functionality for the trainees and how you can only view their history and cannot be linked to new progress
  - Mentions that we added validation rules to the tasks (*and other places where you need to create/upload information*)
  - Mentions the placeholders for the step images in the task/recipe
  - No new functionalities added to the admin side
- Hiraani's comments
  - Aside from the evaluation, she likes the cue cards
  - Hosting process, how to do this?
    - Nat mentions that we will create documentation for them
    - Nat also mentions how the whole process of using the actual app goes (*needs to be on the App Store*)
    - Anna then mentions how the AWS accounts are used in the capstone (being reused so everything will be wiped)
      - We are not required to work on anything past week 12
      - If the client chooses to use the final product, she mentions the whole process that we have to do
      - Mentions the higher security that Apple has when it comes to downloading apps directly into an Apple product and how it has to be uploaded to the AppStore
  - Hiraani asks for instructions
- Victoria's comments
  - Asked if the tasks could be archived
    - We mentioned that we only have a delete function at the moment
- Nat asks about the version of the iPad that the cafe will be using
  - They are unsure
- Questions from the client
  - None from Hiraani and Victoria
- Ashley and Hiraani are both attending the presentation
- Overall feedback, they are happy with the current prototype
  - Anna mentions this is the first complete female team
