Client Meeting Notes #3 (April 11)

Aims

- Walk them through the current Flutter prototype which follows the second design iteration following the vision that Hiraani has mentioned during our Client Meeting 2.5
- Take note of what the clients like or dislike about the current design
- Need to know the functionalities that they want to get a more concrete idea on what the backend will be looking like

---

Questions

- Need to know the functionalities that they want
- Answered: They currently have no additional functionalities that they want us to add

---

Chat Log

- Someone named Natasha is invited into the meeting
- Anna cannot stay for long in the meeting
- Charlotte and Rebecca are not in the meeting at the start
    - Charlotte joins after a while
    - Rebecca might not be able to join
- Saacha starts the walkthrough through the current Flutter prototype (beneficial since not everyone has seen the design)
    - Saacha explains the current design iteration that we've done from where we've left off in the last meeting
    - We have decided to forgo with three screens (admin, support and training modules)
    - She explains our current progress on our end
    - Saacha uses Iste's recording first to show what the current application looks like
    - Then proceeds to show the support screens pathway
    - Then onto the training modules
    - Both Hiraani and Charlotte have mentioned that they like the current design
    - Saacha runs through the video again for Victoria to see
- Hiraani will be away for two weeks, unavailable for the next scheduled meeting

- Leaving on the 21st and coming back on May 6th
- Another person is invited to the meeting (Victoria, we met her in the in-person meeting back then) for a short bit
- Questions about the meeting
    - Charlotte asks if there is a video option for the recipes/tasks → Nat promises that we will try to look into it
- Training modules and recipes look good according to Hiraani
- Nat lists down the list of functions that we have listed down in the #lambda functions thread in the server (under brainstorm-back)
    - All of the mentioned functions is fine with both Hiraani and Charlotte
    - Hiraani says we come back to that after we managed to link the frontend and backend
- Nat mentions that we will go through with this current design
- Hiraani mentions that she can try to make the meeting if ever from London, she says early mornings
    - Nat says that we can try to accommodate to that if ever
